

Oracle Data Integrator 12c: Integration and Administration

Duration: 5 Days

What you will learn

Oracle Data Integrator is a comprehensive data integration platform that covers all data integration requirements from high-volume, high-performance batch loads, to event-driven integration processes and SOA-enabled data services. Oracle Data Integrator's Extract, Load, Transform (E-LT) architecture leverages disparate RDBMS engines to process and transform the data - the approach that optimizes performance, scalability and lowers overall solution costs.

Learn To:

- Use Oracle Data Integrator to perform transformation of data among various platforms.
- Design ODI Mappings, Procedures, and Packages to perform ELT data transformations.
- Administer ODI resources and set up security with ODI.
- Perform data integration and transformation among various platforms.
- Use the ODI graphical interface to define procedures, packages, and ELT jobs.
- Set up and maintain a secure, multi-user ODI environment.
- Implement Changed Data Capture with ODI.
- Use ODI Web services and perform integration of ODI with SOA.

Benefits to You

Improve performance and reduce integration costs across your organization's heterogeneous systems. Centralize data across databases using your new skills to perform data integration, design ODI Mappings, and set up ODI security.

Implement High-Performance Movement and Transformation

This offering details on how to use Oracle Data Integrator (ODI) 12c to implement high-performance movement and transformation of data among various platforms.

ODI Graphical User Interface

The training covers usage of ODI graphical user interfaces that enable users to access different ODI components and resources that form ODI infrastructure.

ODI Repositories

Using the graphical interfaces, you create and manage ODI repositories, which store configuration information about the IT infrastructure, the metadata for all applications, projects, models and other ODI artifacts.

ODI Topology, Models, Mappings, and other

You also learn how to create the ODI Topology, organize ODI models and design ODI Mappings, procedures, packages and other objects.

This course is based on Oracle Data Integrator 12c (12.1.2)

Audience

Business Analysts
Data Modelers
Data Warehouse Administrator
Database Administrators
SOA Architect
Technical Consultant

Related Training

Required Prerequisites

Basic knowledge of ELT data processing

Suggested Prerequisites

Working knowledge of SQL

Course Objectives

Describe ODI Model concepts

Describe architecture of Oracle Data Integrator 12c

Apply ODI Topology concepts for data integration

Design ODI Mappings, Procedures, Packages, and Load Plans to perform ELT data transformations

Explore, audit data, and enforce data quality with ODI

Administer ODI resources and setup security with ODI

Implement Changed Data Capture with ODI

Use ODI Web services and perform integration of ODI with SOA

Course Topics

Introduction

Identifying the Course Units
What is Oracle Data Integrator?
Why Oracle Data Integrator?
Overview of ODI Architecture
Overview of ODI Components
About Graphical Modules
Types of ODI Agents
Overview of Oracle Data Integrator Repositories

Administering ODI Repositories and Agents

Administering the ODI Repositories

- Creating Repository Storage Spaces
- Creating and Connecting to the Master Repository
- Creating and Connecting to the Work Repository
- Managing ODI Agents
- Creating a Physical Agent
- Launching a Listener, Scheduler and Web Agent
- Example of Load Balancing

ODI Topology Concepts

- Overview of ODI Topology
- About Data Servers and Physical Schemas
- Defining the Physical Architecture
- Defining the Logical Architecture
- Mapping Logical and Physical Resources
- Defining Agents
- Defining a Topology
- Planning the Topology

Describing the Physical and Logical Architecture

- Overview of Topology Navigator
- Creating Physical Architecture
- Creating a Data Server
- Testing a Data Server Connection
- Creating a Physical Schema
- Creating Logical Architecture
- Overview of Logical Architecture and Context Views
- Linking the Logical and Physical Architecture

Setting Up a New ODI Project

- Overview of ODI Projects
- Creating a New Project
- Creating and Maintaining Folders
- Organizing Projects and Folders
- Understanding Knowledge Modules
- Exchanging ODI Objects and Sharing Global Objects
- Exporting and Importing Objects
- Creating and Labeling with Markers

Oracle Data Integrator Model Concepts

- What is a Model?
- Understanding Metadata in ODI
- Understanding Reverse Engineering
- Creating Models
- Organizing Models
- Creating Data stores
- Configuring Constraints in ODI
- Creating Keys and References

Organizing ODI Models and Creating Data stores

- What is a Mapping?
- Business Rules for Mappings
- Creating a Basic Mapping

What is a Join?
What is a Filter?
What is a Constraint?
What is a Staging Area?

ODI Mapping Concepts

What is a Mapping?
Business Rules for Mapping
What is a Mapping, a Filter, a Join?
Overview of Integration Process
What is a Staging Area?
Execution Location
Mapping with Knowledge Modules (KM)
Creating an Intermediate Mapping

Designing Mappings

Designing a Mapping
Multiple Source Data stores
Creating Joins
Filtering Data
Disabling Transformations
Overview of the Flow
Specifying the Staging Area
Selecting Knowledge Modules

Mapping: Monitoring and Debugging

Monitoring Mappings
Creating Objects with Operator
Viewing Sessions and Tasks
How to Monitor Execution of a Mapping
How to Troubleshoot a Session
Keys to Reviewing the Generated Code
Working with Errors
Tips for Preventing Errors

Designing Mappings: Advanced Topics

Mapping with Business Rules
Overview of Business Rule Elements
Creating and Tracking Variables
Creating User Functions
Mapping Substitution Methods
Modifying a KM
Showing Variable Values in Log
Customizing Reverse Engineering Using RKM

Creating and Running ODI procedures

What is a Procedure?
Examples of Procedures
Creating Procedures
Adding Commands
Adding Options
Running a Procedure

Viewing Results with Operator

Creating and Running ODI Packages

What is a Package?

Creating a Package

Executing a Package

Creating Advanced Packages

Error Handling

Controlling an Execution Path

Creating a Loop

Using the Advanced tab

Managing ODI Scenarios and Versions

What is a Scenario?

Managing Scenarios with Load Plans

Preparing Scenarios for Deployment

Automating Scenario Management

Scheduling the ODI Scenario

Overview of ODI version management

Handling concurrent changes

Enforcing Data Quality and Auditing Data with ODI

Why Data Quality?

When to Enforce Data Quality?

Data Quality in Source Applications

Data Quality Control in the Integration Process

Data Quality in the Target Applications

Enforcing Data Quality

Exploring Your Data

Auditing Data Quality

Working with Changed Data Capture

Overview of ODI version management

Techniques of Changed Data Capture

Changed Data Capture in ODI

CDC Strategies and Infrastructure

CDC Consistency

Creating Change Data Capture (CDC)

Viewing Data/Changed data

Journalizing

Administering ODI Resources: Advanced Topics

Using Open Tools

Installing Open Tools

Using Open Tools in a Package

Using Open Tools in a Procedure or in a KM

Developing Your Own Open Tools

Setting Up ODI Security

Defining Security Policies

Defining Password Policies

Creating Web Services and Integration of ODI with SOA

Web Services in Action
Using Data Services
Setting Up Data Services
Testing Data Services
Installing Public Web Services
Using Public Web Services
Invoking Web Services
Integrating ODI with SOA

Extending ODI with the SDK

Coding SDK Public Interfaces
Integrating through ODI SDK
Examining SDK examples
